Potential earning with decentralization

Wealth with security

Deployed on Binance Smart Chain

Presented by usp.upit.tech ecosystem

- **USP Platform Overview**

The decentralized economy is evolving rapidly, and our platform represents the next step in blockchain-based earning.

Designed with transparency, fairness and scalability in mind, this binary smart contract system introduces a fully decentralized ecosystem where all funds are locked and governed by smart contracts.

With token pricing tied directly to PancakeSwap and a fixed \$1 transaction fee, we're redefining how binary income systems operate in the Web3 era.

Pancake price

PancakeSwap-based token pricing is given for the live rates fetching. Transactions will be executed based on live rate.

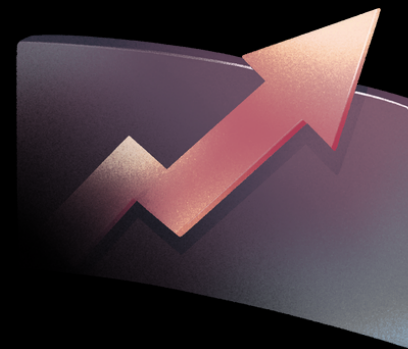

Transaction fees

All transactions in and out carries a fees of 1\$ worth of BNB. Binance smart chain makes it reliable with it's robust infrastructure.

Decentralize

100% decentralized smart contract with locked token structure. Where liquidity is locked and no owner access to user's funds, which makes it stand unique.

Capping for users & leaders

User capping is set to 200% and leadership capping is set to 300% based on certain conditions. You will be explained the conditions in the upcoming slides.

OVERVIEW

The USP Universal is a decentralized smart contract built on Solidity that facilitates binary referral rewards, and time-based income accrual using USDT stablecoin. It features package-based decentralized smart contract, structured team growth, and automated passive income, while preventing token transfers (sales) until income caps are reached.

- Potential earning with decentralized binary system

CORE MODULES & FEATURES

Package Purchase System

Users can purchase in predefined USDT-based packages ranging from \$5 to \$100,000. Packages are validated against an internal list for security and consistency. Each package converts to platform tokens using a live rate. Funds are locked and user can claim profit anytime.

Binary Referral Tree

Each user must join under a referrer and choose a leg (left or right). The system automatically assigns users to the next available node within a leg using Breadth-First Search (BFS) up to 20 levels deep. This structure promotes balanced tree growth and scalability.

Team Building (Leg System)

Two legs per user: left and right. Leg members are tracked through arrays for transparent downline management. Every new user is propagated upward in their referrer's leg arrays up to 20 levels, enabling reward computation and growth tracking.

Daily Income Accrual

Users earn passive daily income based on their package. Income is calculated daily encouraging regular engagement. Income percentage depends on 1:1 leg matching: 1% for no match. Up to 5% based on matching downline size (5-5 max cap)

CORE MODULES & FEATURES

1 Maximum daily income is capped at 200% of the user's deposit for user & 300% for leaders. Once this cap is reached, income accrual halts. Users cannot benefit infinitely without next package. Users can claim profit anytime as send / receive.

2 Income is auto-distributed. Users must manually claim income via dashboard Prevents gas wastage and supports self-service reward collection.

3 Detailed user data is accessible, Binary income, daily income, performance reward income, booster income, royalty income, diamond income, ambassador income

4 Initial mother ID can be used as a referrer if user doesn't have any referrer address for purchasing the package.

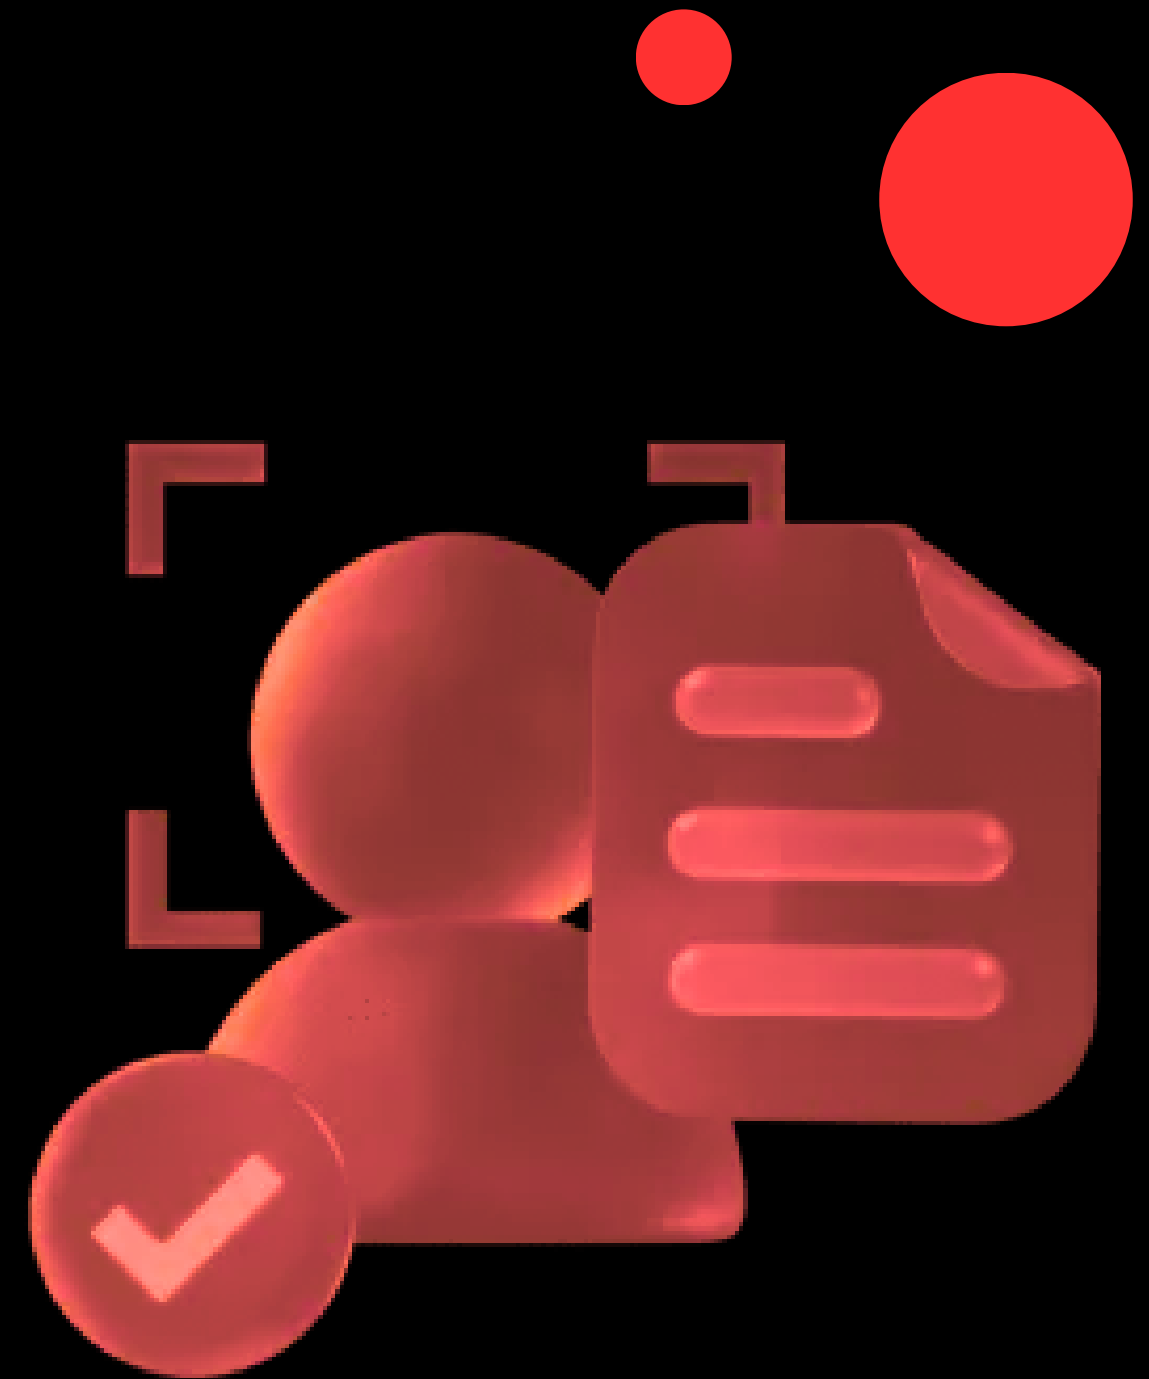

Key Advantages

- Anti-whale Mechanism: Locked token model prevents dumping.
- Self-sustaining Model: Reward growth depends on user activity and referrals.
- Gamified Engagement: Team-building and timed income keep users act
- Scalable Binary Tree: Up to 20 levels ensures deep growth potential.
- Stablecoin Based Packages : Uses USDT value for packages, avoiding crypto volatility for entry. Tokens are sent to the contract as a purchase currency.
- 100 % Safe and Secure, Decentralize
- Anytime user control and no owner control

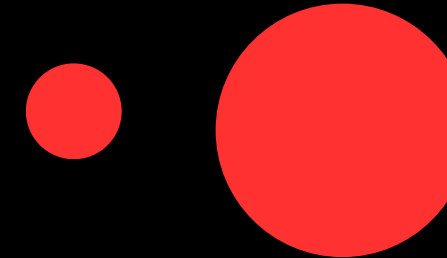

How to Register

- To participate in the platform, users must purchase a package using Universal token by selecting a predefined package tier (ranging from \$5 to \$100,000).
- To do this, a user calls the purchasePackage function, specifying the amount and the referrer's address, along with the desired leg (left or right) for tree placement.
- Based on the live token rate, the user's deposit is converted into an internal token balance, which is recorded for income calculations. The contract then assigns the user to the appropriate binary leg using a breadth-first search algorithm, ensuring balanced team growth.

Types Incomes in USPwwws Universal

● Passive daily income

Users earn passive daily income based on the size of the package they purchase. The income is calculated every day, with an initial base rate of 1% per day

● Booster income

The number of members in each leg influences the daily income percentage, promoting a balanced team-building strategy. For example, achieving a 1:1 pair in both legs unlocks 1% daily, 2:2 gives 2%, and so on—up to 5:5 or more.

● Direct referral reward

Direct Referral Income incentivizes users to recruit others into the USPUniversal ecosystem. When a user purchases a package, their referrer earns 10% of the deposit amount,

● Binary income

Binary income is allotted to user when left and right side business matches to given thresholds. upto 20 levels.

● Performance rewards

When the minimum business from both legs meets a threshold, users receive fixed rewards (e.g., \$10 to \$500,000). If user business matches to 5000\$, user will get 50\$.

● Royalty income

All system business matching per day, 2% and 2 % will be collected in royalty income pool. This will be equally distributed to all eligible royalty members. Royalty pool 1%, 0.5% for diamond pool and 0.5% for ambassador pool.

Use Cases

Decentralization USPwws launches

Reward-based staking with referral incentives

DAO-controlled community growth campaigns

DeFi affiliate or promotion platforms

Packages in USP Universal

Basic packages

| 5 USDT

| 250 USDT

| 10 USDT

| 500 USDT

| 25 USDT

| 1000 USDT

| 50 USDT

| 2500 USDT

| 100 USDT

| 5000 USDT

| 10000 USDT

Royalty packages

| 20000 USDT

| 50000 USDT

| 100000 USDT

User can purchase royalty packages only after purchasing packages till 10,000 USDT basic packages.

Booster, Performance & direct income

Performance rewards

Matching		Rewards
1000 USDT	<div></div>	10 USDT
5000 USDT	<div></div>	50 USDT
10000 USDT	<div></div>	100 USDT
50000 USDT	<div></div>	500 USDT
100000 USDT	<div></div>	1000 USDT
1000000 USDT	<div></div>	10000 USDT
10000000 USDT	<div></div>	50000 USDT
100000000 USDT	<div></div>	100000 USDT
1000000000 USDT	<div></div>	500000 USDT

Direct income **10%**

Booster income

On both sides		%
1-1 member	<div></div>	2 %
2-2 member	<div></div>	4 %
3-3 member	<div></div>	6 %
4-4 member	<div></div>	8 %
5-5 member	<div></div>	10 %

Sustainability and Security

Worlds best and full automated Binary platform

- All claim income deduction 10% , All transaction fees 1\$ worth of BNB.
- This dual allocation keeps the system healthy and continuously rewarding.
- Decentralize and 100% secure

CONCLUSION

This decentralized binary smart contract system offers a next-generation earning model with predictable income, transparent rewards, and community-first incentives. With daily profit, powerful referral mechanics, deep team rewards, and structured royalty, the platform is designed for scalability, sustainability, and maximum impact in 2025 and beyond.
